

Cut time in half for complex Jira admin tasks

with Configuration Manager for Jira (CMJ)

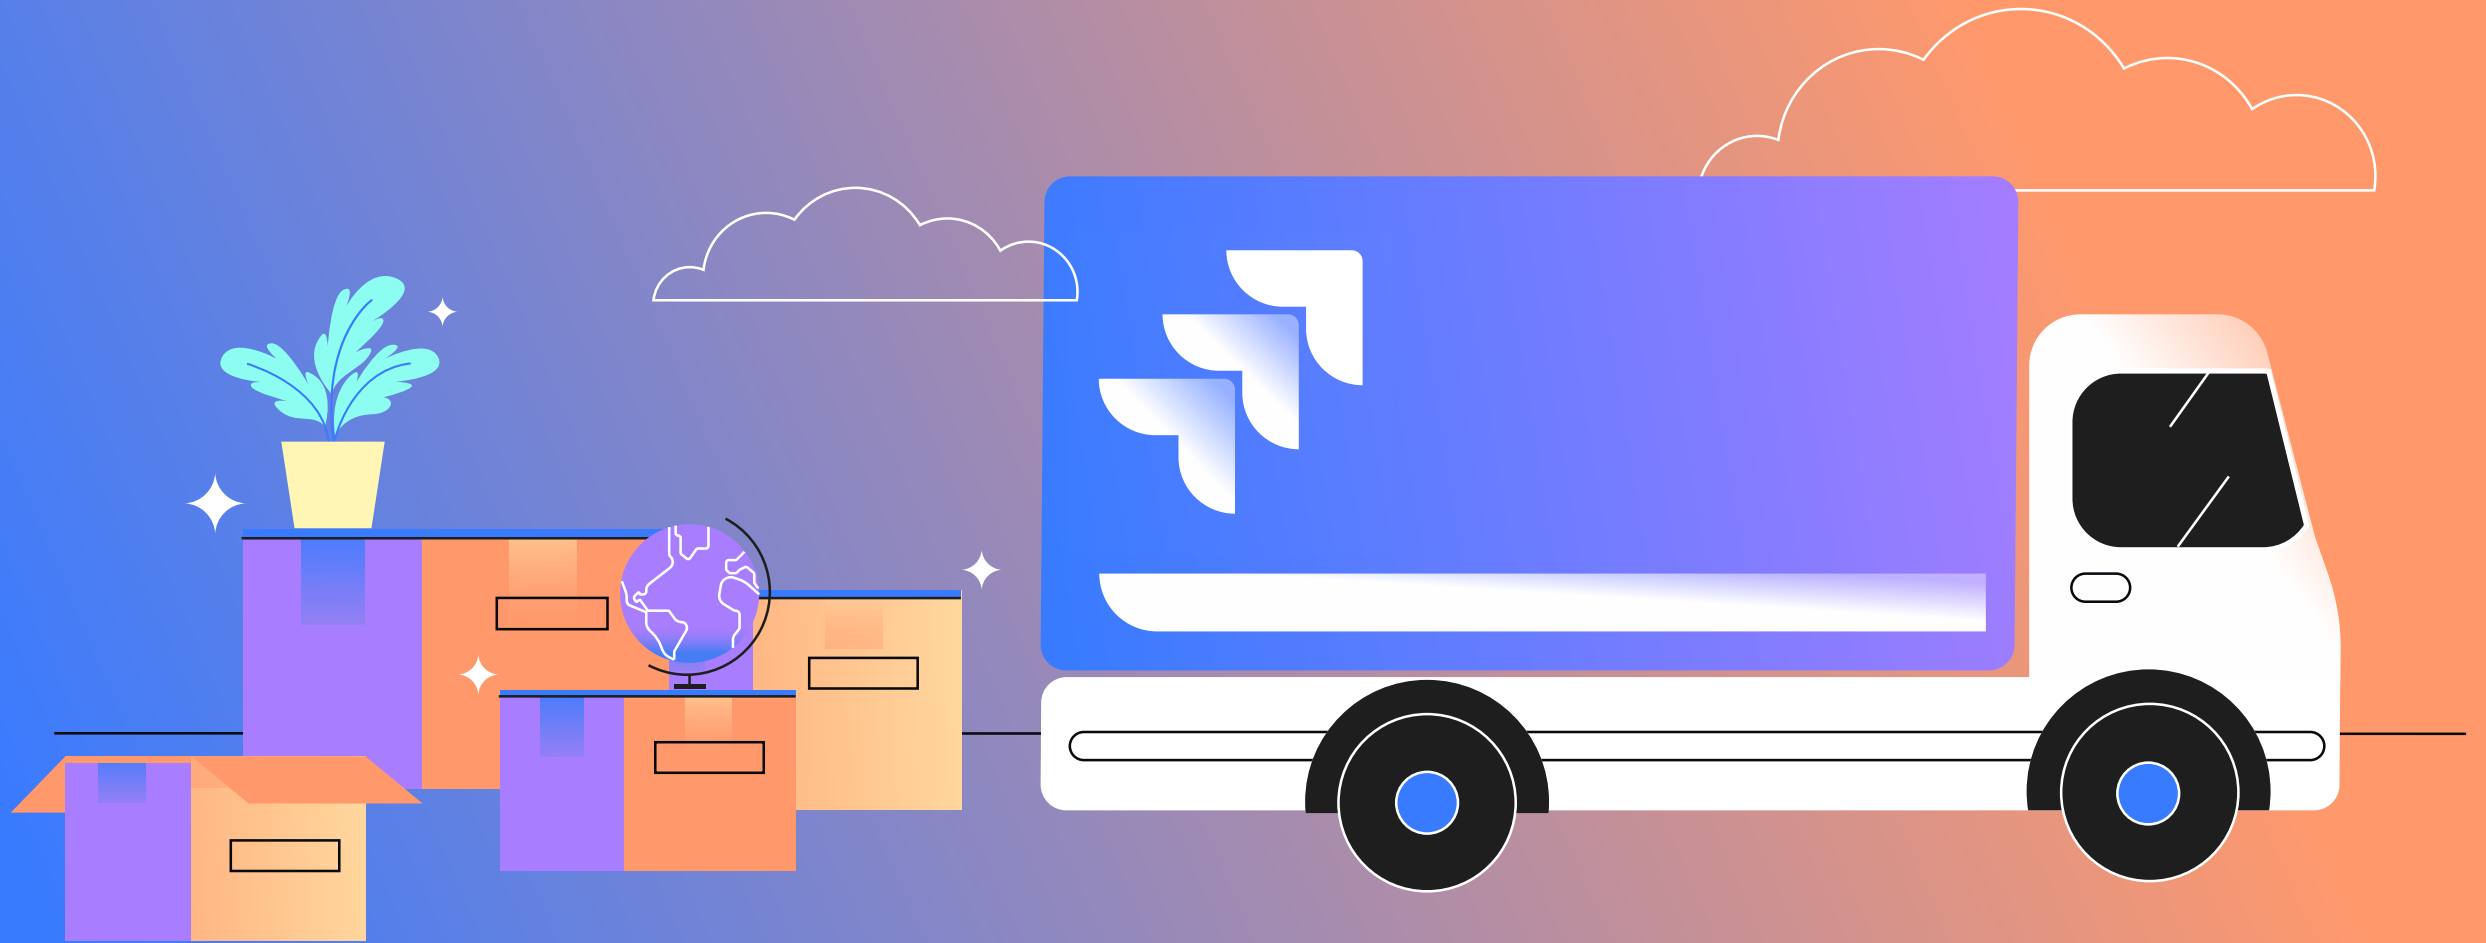

Enterprise teams rely on CMJ to deliver cloud migration projects faster while bringing control, clarity, and confidence to ongoing change management.

When to use JCMA and CMJ for the best migration experience

Ideal migration process

CMJ cuts down migration time by over 50%,
especially for enterprise customers with a sprawling estate.”

Atlassian Platinum Solution Partner

Make pre-migration easier with CMJ

Use CMJ to clean up, consolidate, and troubleshoot your Jira instance before migration, audit configs, fix issues, and merge environments with confidence.

Take inventory

Eliminate guesswork when reviewing configuration usage and dependencies. Filter, trace, and export actionable insights for stakeholders.

Resolve performance issues

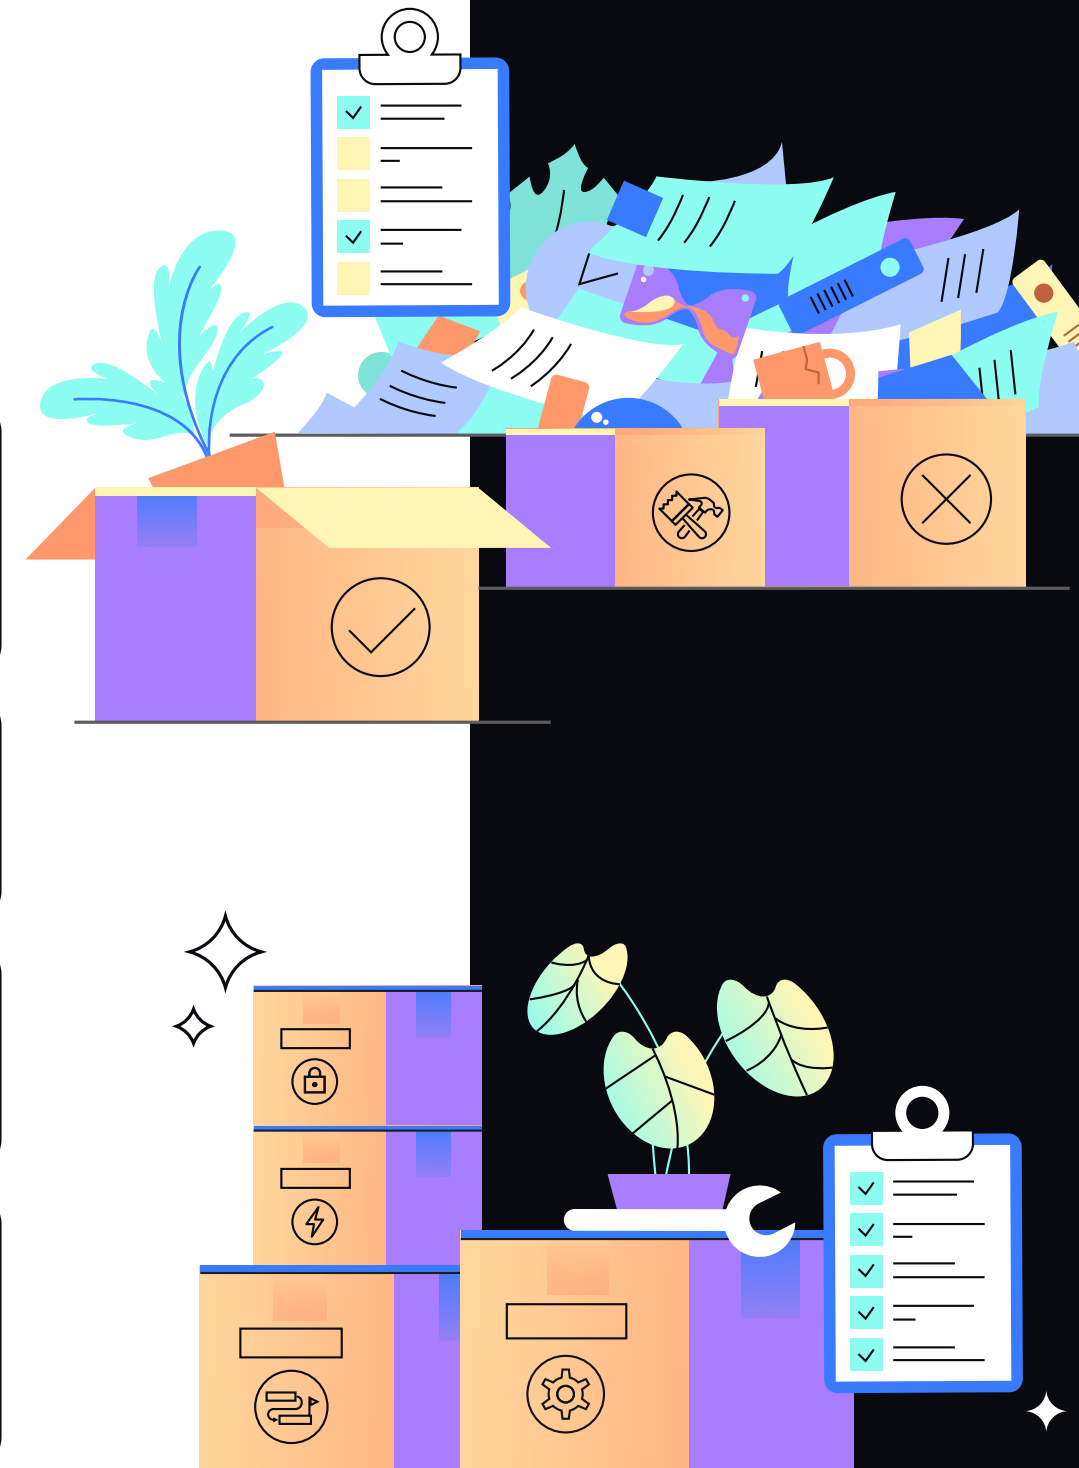

Quickly identify broken configurations, missing references, and root causes of slow performance and poor user experience.

Streamline projects and settings

Merge duplicate fields without breaking critical dependencies. Archive outdated projects in bulk, manually, or on a set schedule.

Merge Data Center instances

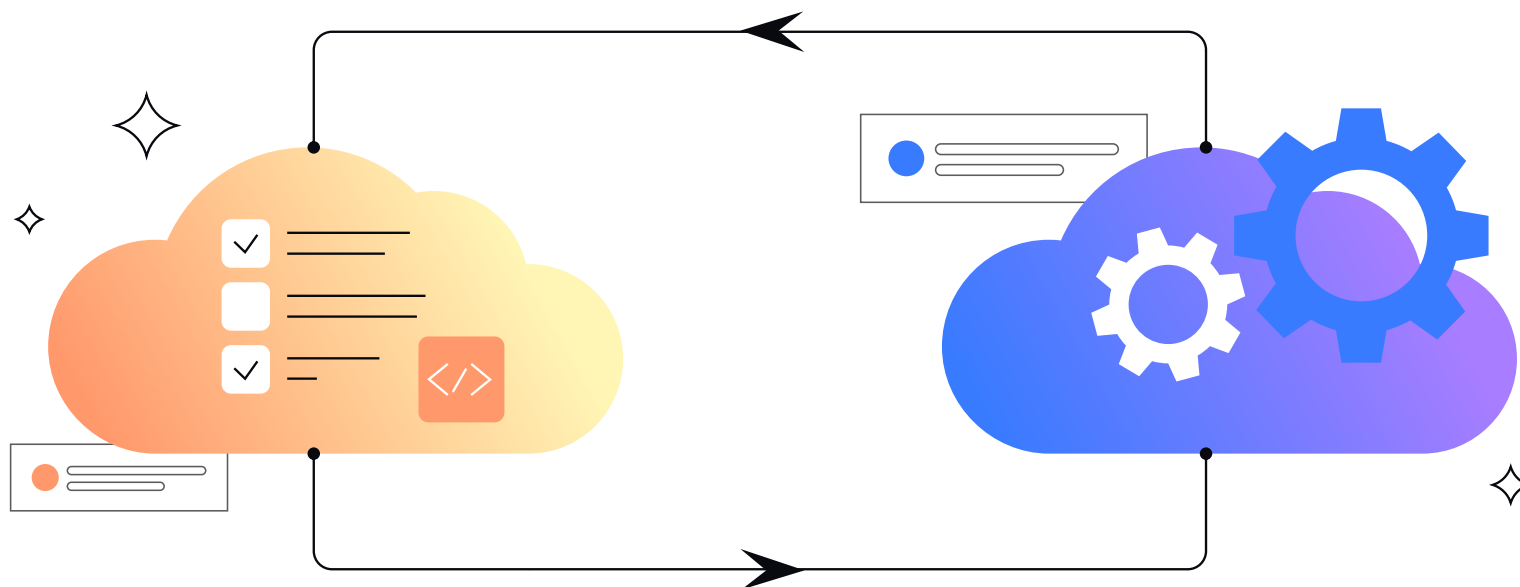

CMJ handles the heavy lifting of consolidating multiple Data Center instances – migrating full projects and configurations while keeping environments aligned.

Why teams keep using CMJ long after the move to cloud

CMJ is the foundation for secure change management in cloud.

- Safely test changes in a sandbox before promoting to production.
- Automate deployments to reduce manual work and prevent errors.
- Get full visibility into every change and its downstream impact.
- Keep your change process audit-ready and aligned with IT governance.
- Scale your Jira instance with confidence – whether you're a solo admin or part of a global team.

We cut change management time by 60% each month with Configuration Manager.”

Daniel T., senior DevOps engineer, TD Bank

When CMJ delivers the most impact

CMJ is built for:

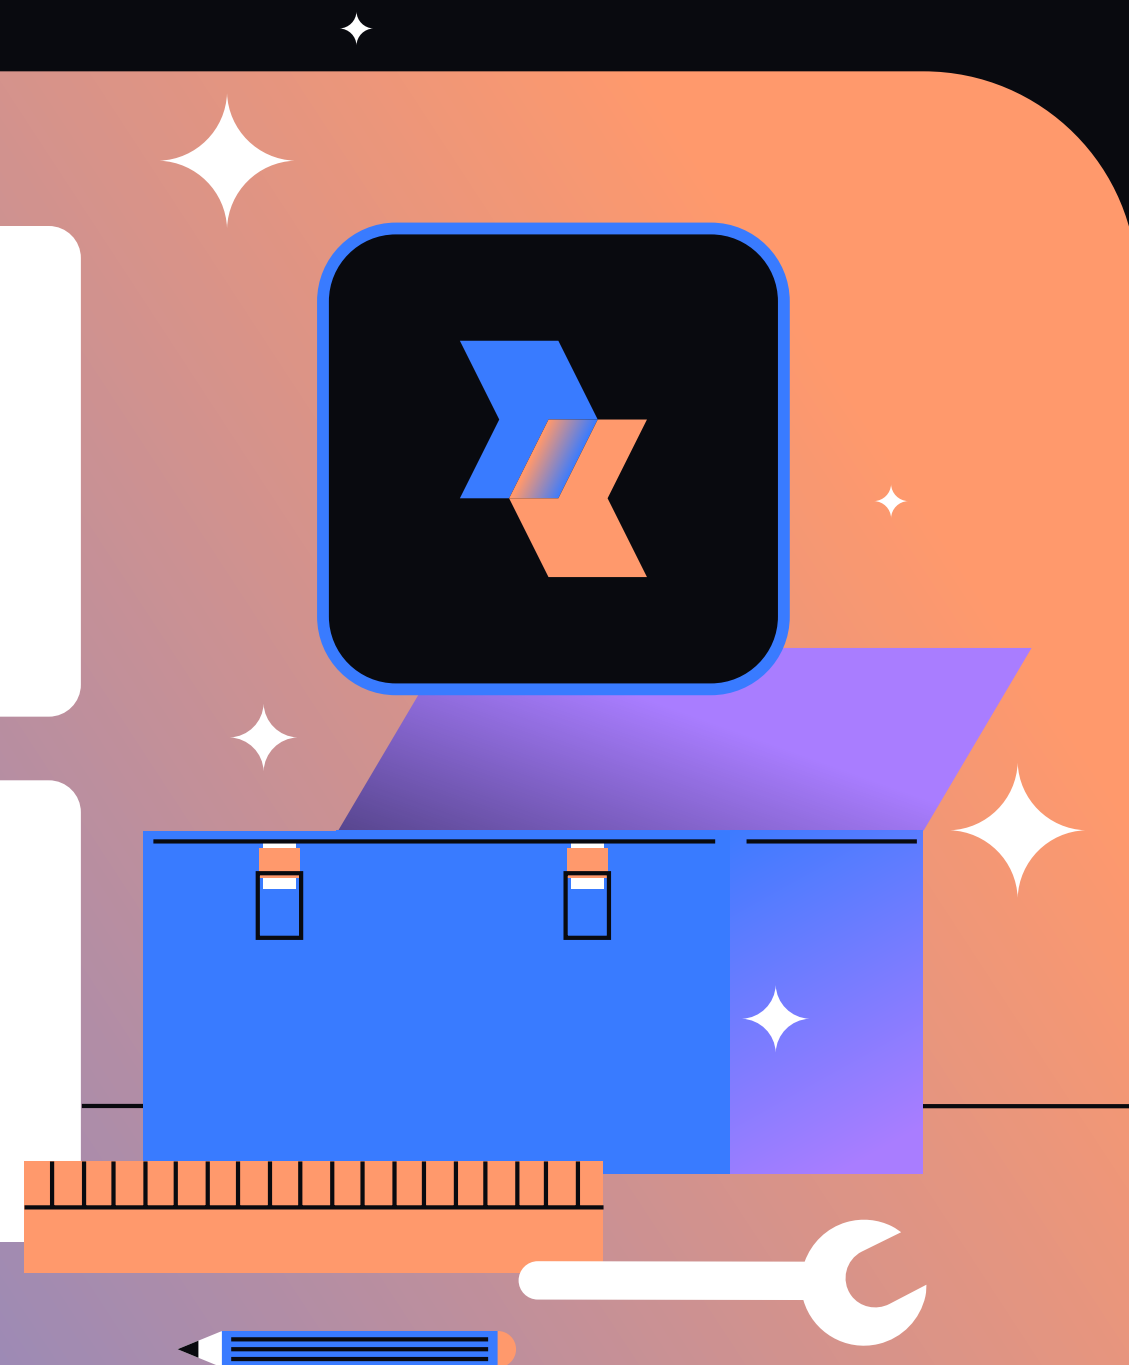

- Complex or phased migration
- Managing multiple Jira instances
- Need to test or prep configs
- Pre- or post-migration cleanup
- Creating configuration backups
- Improving performance on Data Center
- Standardizing configurations across multiple sites
- Ongoing change management

Perfect for:

- Atlassian admins
- Cloud delivery teams
- Migration project managers
- IT leaders

Teams choose CMJ for:

- Reduced risk in the change process
- Fast, reliable configuration analysis
- Safe, scalable deployments across environments

CMJ is the easy button for promoting config changes between environments whether dev/staging to prod or copying from one environment to another. With CMJ there's no need to manually re-apply project config data. I love configuring Jira, but that doesn't mean I want to make the same exact changes again and again. Save yourself a ton of time and know it's being done right with the team at Appfire behind you."

Adam St Prix

Atlassian Head of Solution Architecture

Appfire's cloud investment

Our expanding cloud ecosystem supports more use cases and fewer surprises along the way.

90+ cloud apps

(and growing), built to meet evolving customer needs.

Expanding Forge support

We're building for the future of Atlassian Cloud.

Feature-rich in cloud

With enhancements designed for performance, scale, and long-term usability, we're bringing the full power of our Data Center apps to cloud.

Why Appfire cloud?

Appfire isn't just cloud-ready. We're cloud-focused.

We're committed to helping customers thrive in Atlassian Cloud with:

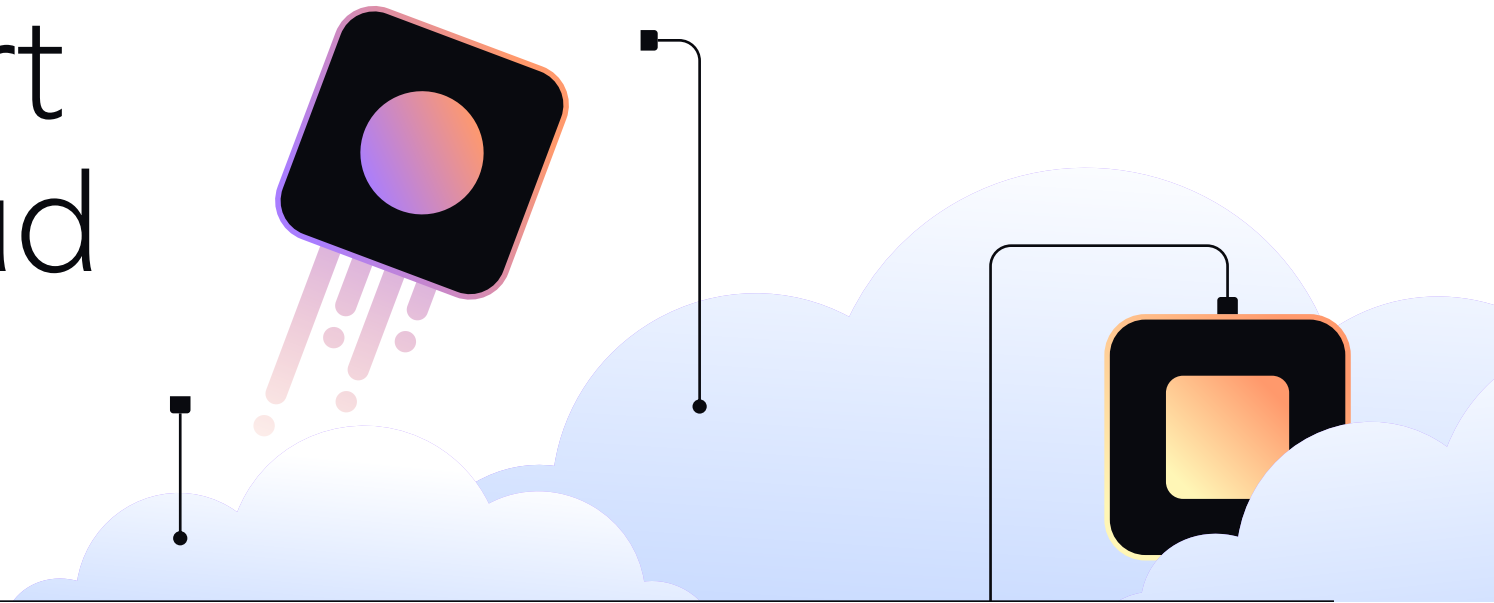

- Continuous innovation across our cloud portfolio.
- Strategic, scalable adoption of Forge.
- Long-term investment in modern, secure infrastructure.
- Enterprise-grade reliability and compliance support.

Customer confidence starts here

Whether migrating or already in the cloud, Appfire delivers powerful, scalable, and secure solutions – built with the future in mind.

Migration support for Atlassian Cloud

Practical guidance for your Jira, Confluence, and JSM Cloud migrations.

Keep the functionality your teams rely on

Appfire's no-cost migration support helps you plan, test, and validate your move to Atlassian Cloud. Work directly with migration experts to identify issues early and prepare for production migration.

How Appfire migration support helps

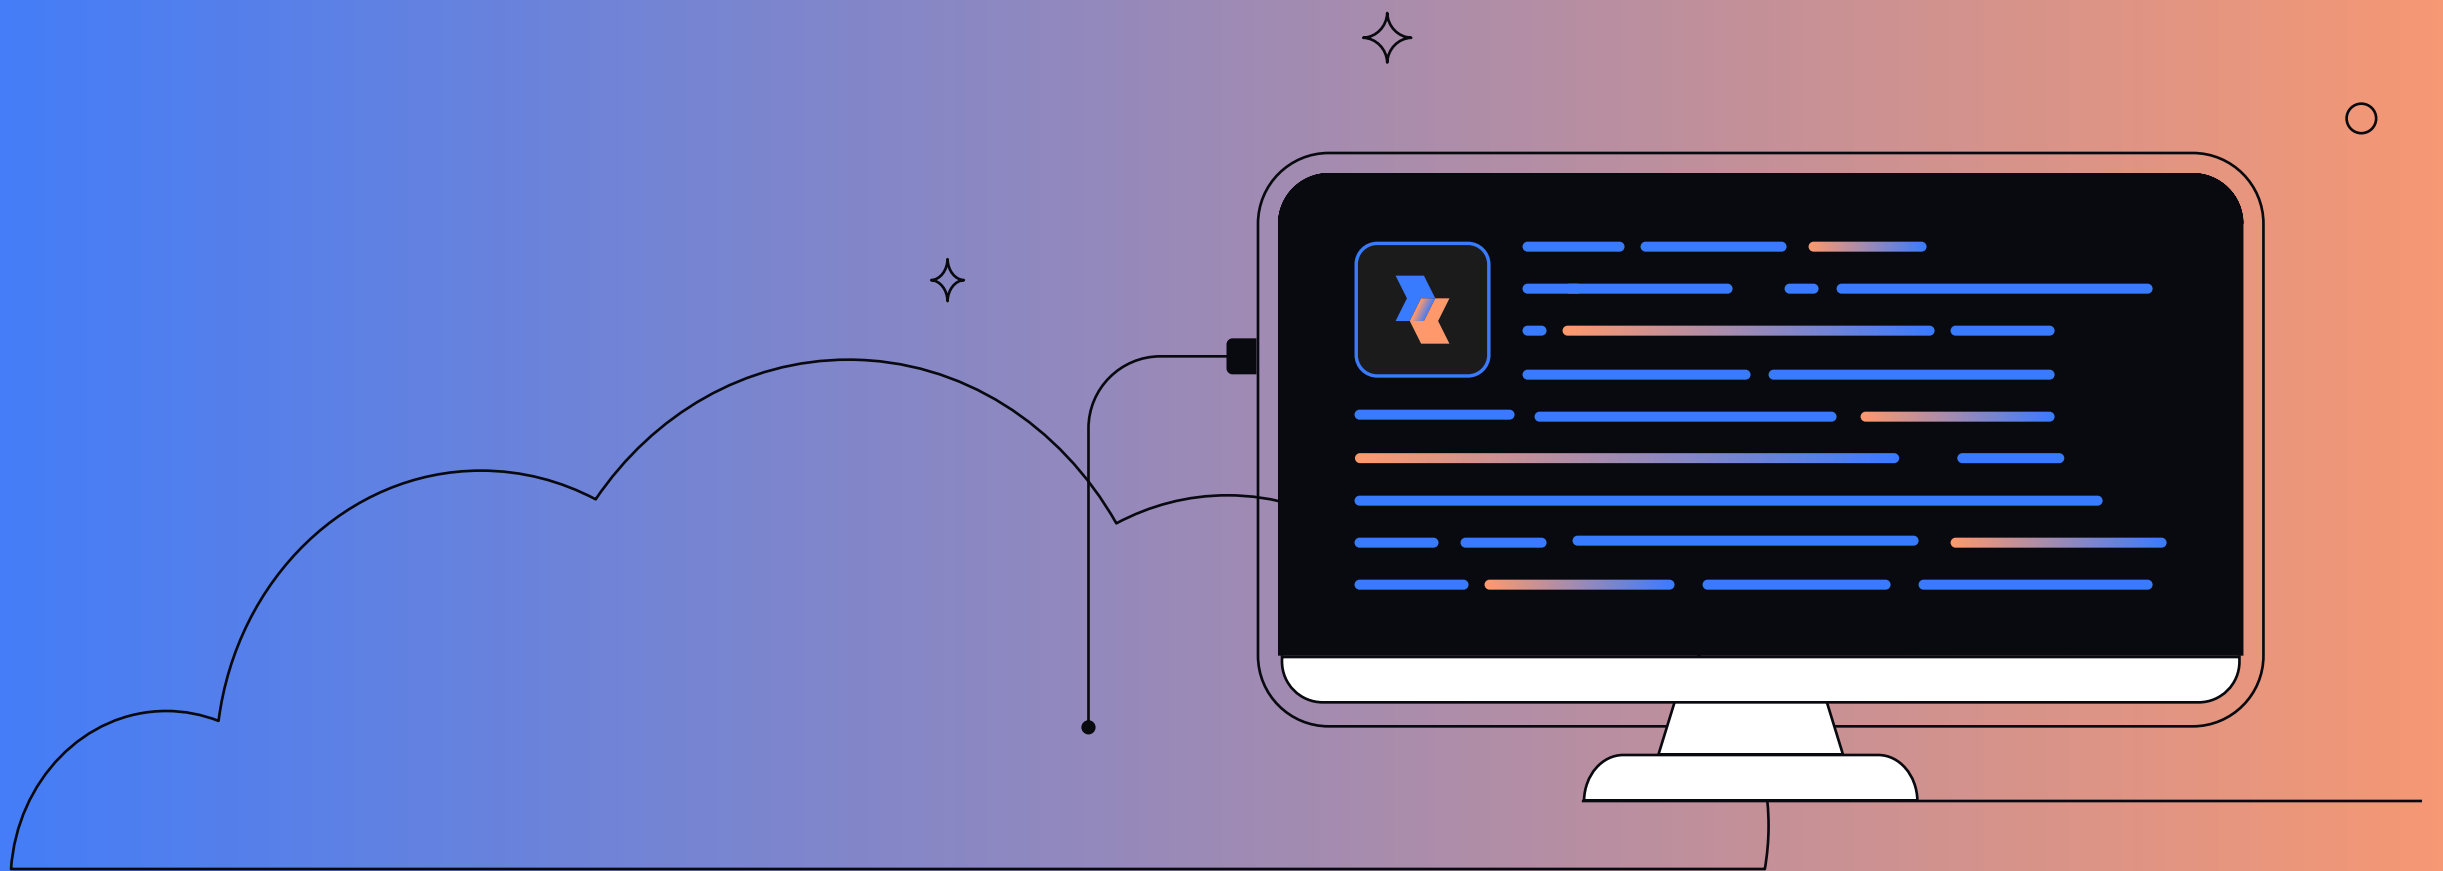

Moving to Atlassian Cloud isn't just about Jira, Confluence, or JSM. It's about the apps, workflows, and configurations that support how your teams work. When you register your migration, we'll help you:

- **Spot and remove clutter**
Identify and eliminate redundant apps, unused spaces, and outdated configurations so you don't carry unnecessary baggage into Cloud.
- **Keep essential apps with you**
Simplify Appfire app migrations early and confirm compatibility so your critical tools and automations make the move with you.
- **Avoid surprises and reduce risk**
Make sure your projects, data, and apps are ready for go-live so nothing slows you down or goes missing.
- **Talk to experts**
Get tailored recommendations and a second set of eyes from teams who've supported hundreds of successful Atlassian Cloud migrations.

Know what to expect before production migration.

Appfire experts help you assess app readiness, identify potential issues early, and prepare for production migration so your team can avoid unnecessary delays, rework, and disruption.

Compare, validate, and move Jira configuration changes from sandbox to production
